

Sharing Sustainable Healthcare Solutions with Disadvantaged Communities

MediShare works with a range of partners, government & not-for-profit organisations, to add value to the infrastructure of health care in disadvantaged communities through the provision and shipping of recovered usable medical equipment and resources.

The focus is to enhance the infrastructure of the health systems to improve their medical facilities and make a positive impact on the delivery of health care for their communities.

By working with recipients in identifying their specific needs for medical equipment and resources, and by managing the shipment of requested equipment, MediShare minimises the negative effect on the environment by reducing landfill.

MediShare assists with the implementation of training programs by sharing knowledge & expertise to upskill the medical practitioners in developing countries. Providing an effective and sustainable health care system ensures quality health outcomes for their communities.
